

**DOCK AND STAIR PURCHASE
REQUEST FOR PRICE QUOTATION
QUESTIONS**

as of 09/05/2023

Q: We don't manufacture standard 6' x 9' sections; it would be considered custom. Is the Town open to achieving the same footprint if we work with our standard sizes?

A: Yes, we will accept a comparable layout, even if the docks aren't the precise size. If a vendor has something equal to or better, it may be submitted.

Q: What is the approximate maximum depth that should be planned for so that enough pipe lengths and bracing can be estimated for deeper water?

A: The average regular water depth is about 5'. Our target is to have the dock system itself set 12-16" above the regular water line.
